

Halo[®], the CSTD designed to fit.

Pharmacists, technicians and nurses have a significantly higher than normal incidence rate of repetitive motion injuries.^{1,2} According to NIOSH and OSHA:

- Musculoskeletal injuries, such as carpal tunnel syndrome, develop in the hands and wrists due to repetitive, forceful maneuvers;³
- Minimizing twisting motions and designing ergonomic tools will help reduce these issues.³

Be ready for
USP 800
WITH HALO[®]

Discover Halo[®] – the CSTD designed to reduce repetitive motion injuries.

- Minimal force required to attach parts;
- Straight push-on pull-apart movements reduce twisting motions;
- Components designed to distribute work over a larger surface to reduce strain, as recommended by NIOSH and OSHA.²
